

Introducing two projects that have led to exciting new applications!

Presenting a new sack gripper below. Thank you Pert Engineering of Hong Kong for solving this with us.

The other case is an order for in all 320 (!) VM120.

Read about the customer, the lifting situation solved and the product improvements that have been made on page 2.

We are also presenting the very first TAWI/VacuEasylift worldwide exhibition plan. Have we missed anything? Please fill in and fax back any corrections.

HONG KONG Post

Project number:
737
Project engineer:
Mikael Kayser, TAWI

A special gripper for mail bags was made for the Hong Kong post. In all six VacuEasylift VM160 (long flexed handle) with grippers were installed. The gripper has turned out to be a success, with a very simple design it functions perfectly with textile mailbags. Sack and gripper is illustrated above alongside post with VacuEasylift in place.
